

what do **heavy** **vehicle** mechanics do?

With booming transport, mining and heavy construction sectors in Australia, there are skills shortages, great opportunities and rewarding careers for people servicing, repairing and maintaining trucks and heavy equipment.

You will be trained:

- to service and maintain diesel engines and heavy vehicle components
- to understand the technical workings of engines, transmissions and mechanical components
- to use computerised testing equipment to diagnose faults and re-program electronics
- to strip down and re-assemble engines and components
- to service braking systems, trailers and hydraulics
